

ESG Call to Action

Organisational success is no longer being measured by increased profit, dividends or share price but rather by the value that its activities and its outputs add to society. Enterprise value is now being seen through the lens of how the three critical dimensions for sustainable development namely the economy, society and the environment, impact on a company's financial condition, its balance sheet, its operating performance, its income statement and cash flow, its risk profile, and its cost of capital.

SoluxR: What we do

Enable effective gathering and analysis of vital internal and external risk intelligence; Facilitate the creation and understanding of an organisation's enterprise risk architecture; Expose the consequences of major hazards throughout the organisation and its ecosystem; Identify critical and complex risk interrelationships and their consequences; Enable robust scenario analysis and modelling impacts, risks and mitigants; accelerated creation of comprehensive and workable strategies.

Key Benefits

- Ability to understand, anticipate, respond, recover and quickly adapt as ESG plans encounter challenges
- Early foresight and insight of issues and opportunities before they develop
- Significantly lower cost, faster and better analysis and planning
- A single comprehensive view of what's actually going on across your organisation
- Rapidly assess the impact and effectiveness of urgent remediations
- Detect systemic issues across the organisation
- Support regulatory due diligence and evidence requirements
- Intuitive tools
- Highly visual actionable information
- Improved decision making.

Key Features

- Automated internationally proven and accepted business risk, resiliency and governance methodologies.
- Algorithms help generate actionable insights for model testing and refinement.
- Scenario analysis to support agile and dynamic decision making.
- Clear, meaningful data outputs presented in highly visualized formats.
