

## Useful Approaches

- **Point Solutions** for up to 50 people: You know and understand your issues. They are complicated but you have a plan. You know what questions to ask and the people who can answer them. You just want information fast so you can make a concrete decision now. Examples include supply chain impacts arising from pandemics, business disruption ...
- **Extended Solutions** for an unlimited number of people: Issues are arising and they are complex. There is little or no precedent so the right path is not always clear. You need different people, from different departments and different countries/locations to pool knowledge and experience to help arrive at the right decisions for management consideration. Examples include business and operating model disruptions arising from geo-political tensions, weather, technology, regulatory change (Libor Transition ...)
- **Enterprise Solutions:** Yours is a complex and distributed organisation. You are spread across countries and operate in a highly competitive industry sector. You are agile and data driven. You want a consistently reliable way of solving complex and complicated problems. You need scenario driven insights underpinned by evidence based, actionable information to provide sufficient certainty that business objectives can be achieved. Examples include multiple combinations of the above delivered in a seamless and structured way.

### **What do you get from SoluxR?**

1. Robust scenario analysis and modelling impacts, risks and mitigations
2. Early foresight and insight of issues and opportunities before they develop
3. Significantly lower cost, faster and better analysis and planning
4. A single comprehensive view of what's actually going on across organisations and wider ecosystem
